

Experimental Precipitation Forecast Feb-April 2013

Output of the Combined General Circulation Model (CGCM) is downscaled to obtain the precipitation forecast on seasonal time scale for the selected stations of Pakistan. Above normal precipitation is expected in the Khyber Pakhtunkhwa, Gilgit-Baltistan and Kashmir region. Most parts of the Punjab, some parts of Baluchistan and whole of the Sindh province is expected to receive Normal (1971-2000) precipitation. Major parts of the Baluchistan province are likely to receive below normal rainfall. As a whole there may be normal rainfall although in February and March above normal rainfall is expected in the northern half of the country.

Along X-axis stations are arranged in ascending order of Latitudes from left to right.
